

Spectrally Flat Class B (ex First Class) pyranometer ISO9060

Description

PCTRA056 pyranometer is intended for solar radiation measurement on a plane/level surface (Watt/m²). The radiation measured is the sum of direct sun and of diffuse irradiance (global radiation).

PCTRA056 uses a Spectrally Flat Class B (ex first class) pyranometer ISO 9060 and it complies with WMO publication "Guide to meteorological Instruments and Methods of Observation".

The pyranometer is based on a thermopile sensor. The sensing surface of the thermopile is coated with an opaque black paint providing a flat spectral response for the full wavelength range. The spectral range of the pyranometer is determined by the transmission through the glass dome K5 type.

The irradiance energy is absorbed by the blackened surface of thermopile providing a temperature difference between the centre of the sensor (hot junction) and the body of pyranometer (cold junction). This difference is then converted to a voltage according to the Seebeck effect.

PCTRA056 has two domes with 50 and 32 mm external diameter to guarantee correct thermal insulation from wind and to reduce sensitivity to thermal radiation. The dome protects the thermopile from dust which could modify spectral sensitivity. PCTRA056 is then provided with a bubble level for the correct leveling of the sensor.

To avoid condense formation on the inner surface of the dome, moisture absorbing silica-gel is put inside the pyranometer.

Spectrally Flat Class B pyranometer

Technical specifications

| | |
|--|---|
| Sensor type | Thermopile |
| Sensitivity (typical) | 6 12 $\mu\text{V}/(\text{W}/\text{m}^2)$ |
| Impedance | 33 Ω 45 Ω |
| Measuring range | 0 ... 2000W/m ² (4000W/m ² opt.) |
| Viewing angle | 2n sr |
| Spectral range (dome transmission) | 283 ... 2800nm |
| Operating temperature | -40 ... 80°C |
| Output | <p>According to the model:</p> <ul style="list-style-type: none"> • Analog in $\mu\text{V}/\text{W}/\text{m}^2$ • Analog 4...20mA • Analog 0...1V, 0...5V o 0...10V • Double output: analog 4...20 mA + digital RS485 Modus-RTU • Digital RS485 Modbus-RTU - Digital SDI-12 |
| Power supply | 10...30V (outputs 4...20mA - 0...1V - 0...5V) 15...30V (output 0...10V) 5...30V (RS485 Modbus-RTU) 7...30V (SDI-12) |
| Protection rate | IP67 |
| Response time (95%) | <10sec |
| Zero off-set | <ul style="list-style-type: none"> - Response to 200W/m² thermal radiation: < ±10 W/m² - Response to 5K/h change in ambient temeprature: < ±4 W/m² - Total zero off-set including the effects a), b) and other sources: < ±15 W/m² |
| Long-term instability (1 year) | < ±1 % |
| Non-linearity | < ±1 % |
| Cosine response | < ±18 W/m ² |
| Spectral error | < ±0.5 % |
| Response depending on the temperature | < 1,5 % |
| Tilt response | < ±2 % |

Ordering codes
